INSTALLATION, OPERATION & SERVICING

NOTICE: Information in this manual is subject to change without notice. MIDWAY reserves the right to make improvements in equipment function, design, or components as progress in engineering or manufacturing methods may warrant.

Fill out and mail in the Game Information Card. Be sure to include the game serial number from the label on the rear of the cabinet. For your records, write the game serial number in the manual. **SERIAL NUMBER**

SAFETY INSTRUCTIONS

The following safety instructions apply to operators and service personnel. Read these instructions before preparing your game for play. Other safety instructions appear throughout this manual.

DEFINITIONS OF SAFETY TERMS

DANGER indicates an imminent hazard. If you fail to avoid this hazard, it **WILL** cause death or serious injury.

WARNING indicates a potential hazard. If you fail to avoid this hazard, it **COULD** cause death or serious injury.

CAUTION indicates a potential hazard. If you fail to avoid this hazard, it **MAY** cause minor or moderate injury. **CAUTION** also alerts you about unsafe practices.

NOTICE indicates information of special importance.

WARNING: TRANSPORTING GAMES. This game contains glass and fragile electronic devices. Use appropriate care when transporting this game. Avoid rough handling when moving the cabinet. Do not move this game with the power on.

WARNING: DISCONNECT POWER. Always turn the power OFF and unplug the game before attempting service or adjustments. Installing or repairing PC boards with power ON can damage components and void the warranty. Be sure that you securely install ground wires.

WARNING: GROUND GAMES. Avoid electrical shocks! Do not plug in a game until you have inspected and properly grounded it. Only plug this game into a grounded, three-wire outlet. Do not use a "cheater" plug, or cut off the ground pin on the line cord.

WARNING: AVOID ELECTRICAL SHOCKS. This video game system does not utilize an isolation transformer. Internal, cabinet A.C. isn't isolated from the external, A.C. line.

WARNING: HANDLE FLUORESCENT TUBE AND CRT WITH CARE. If you drop a fluorescent tube or CRT and it breaks, it will implode! Shattered glass can fly eight feet or more from the implosion.

CAUTION: CHECK POWER SUPPLY LINE VOLTAGE SELECTOR SWITCH. Set the 110/220 VAC selector on the power supply for the correct local line voltage. Check the selector setting before switching on the game.

CAUTION: USE PROPER FUSE. Avoid electrical shock! Replacement fuses must be of the same type as those they replace. Fuse voltage and current ratings must match ratings on the original fuse.

CAUTION: ATTACH CONNECTORS PROPERLY. Be sure that printed circuit board (PCB) connectors mate properly. If connectors do not slip on easily, do not force them. A reversed connector may damage your game and void the warranty. Connector keys allow a connector to fit only one set of pins on a board.

CAUTION: TAKE CARE WHEN SHIPPING HARD DISKS. The hard disk drive must be packed in an anti-static bag. When shipping the drive for repair or replacement, pack it in an approved container (P/N 08-8068). Never stack or drop hard disk drives.

EPILEPSY WARNING

A very small portion of the population has a condition which may cause them to experience epileptic seizures or have momentary loss of consciousness when viewing certain kinds of flashing lights or patterns that are present in our daily environment. These persons may experience seizures while watching some kinds of television pictures or playing certain video games. People who have not had any previous seizures may nonetheless have an undetected epileptic condition.

If you or anyone in your family has experienced symptoms linked to an epileptic condition (e.g., seizures or loss of awareness), immediately consult your physician before using any video games.

We recommend that parents observe their children while they play video games. If you or your child experience the following symptoms: dizziness, altered vision, eye or muscle twitching, involuntary movements, loss of awareness, disorientation, or convulsions, **DISCONTINUE USE IMMEDIATELY** and consult your physician.

INSTALLATION & INSPECTION

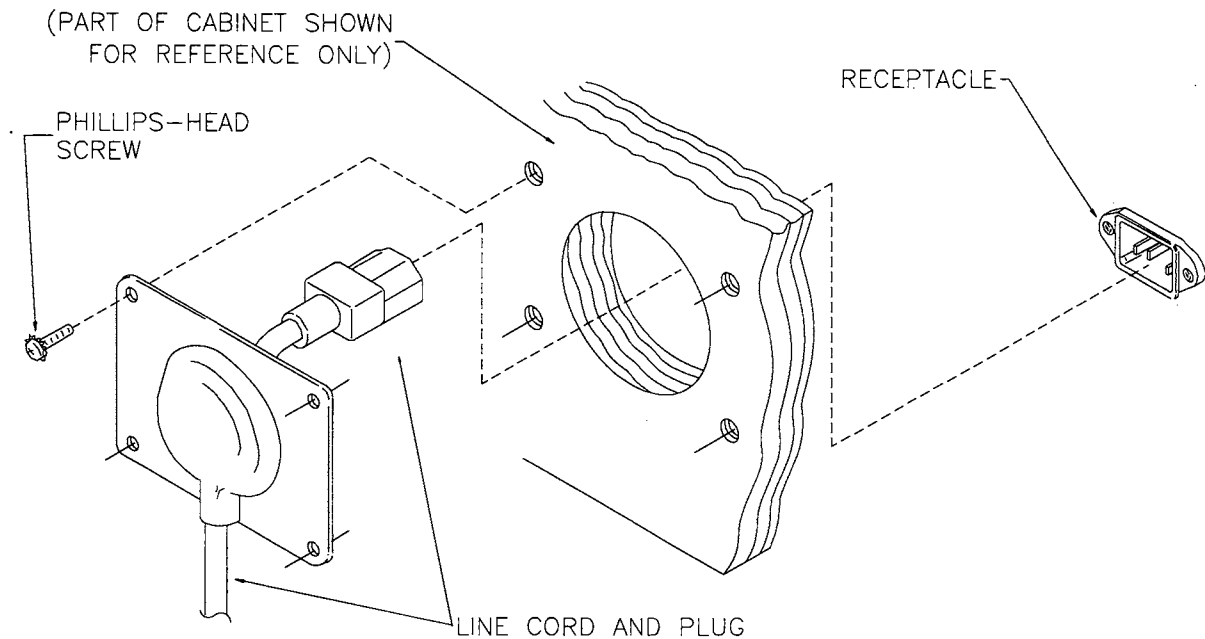

WARNING: The cabinet is top heavy. Use the two handles when moving the cabinet.

1. Remove all items from the shipping containers and set them aside. Inspect the exterior of the cabinet, control panel, and guns for any damage. Pay special attention to cabinet edges, seams, and corners.
2. Remove and save the screws at the top and sides of the rear door. Unlock the rear door, then lift it off of the cabinet and set it aside. Inspect the cabinet interior for any signs of damage. Check all major assemblies to assure that they are mounted securely. Check the shotguns for signs of damage.
3. The coin door keys are attached to a trigger on one of the guns. Unlock and open the coin door. The cash box door and rear door keys are located on a key hook attached to the rear of the coin door. Unlock and open the cash box door. Remove the spare parts stored in the cash box.
4. Leg levelers and nuts are located in the spare parts. Install one nut onto each leg leveler and hand turn it up against the base of the leg leveler. Install one leveler with its nut into the threaded hole in each corner of the cabinet. Turn them all the way into the holes, but do not tighten at this time.
5. Refer to the Cabinet Wiring Diagram (Section 4), and check to see that all cable connectors are correctly secured. *Do not force connectors; they are keyed to fit in only one location.* Bent pins and reversed connections may damage your game and void the warranty.
6. Locate the gun holster assemblies. There are three mounting holes in a triangular pattern on either side of the coin door. Orient the holsters over the holes and install with tamper resistant screws.

7. An extra padlock may be installed to secure the rear door. A hasp is located in the spare parts bag. Remove the two lock bracket nuts from inside the cabinet, above the rear door opening. Slide the hasp onto the bolts so that it protrudes from the hole in back of the cabinet. Reinstall nuts and tighten.
8. Modify the lock plate at the top of the rear door. Remove the bolts and nuts from the lock plate, then rotate the plate so that the slot will be above the door. Reinstall the bolts and nuts and tighten firmly.

9. The power cord is with the spare parts. Remove and save four screws from the line cord cover plate at the rear of the cabinet. Match the holes on the IEC plug with the prongs in the receptacle and push firmly to seat the line cord. Route the cord away from cabinet wheels and foot traffic areas. Hang excess cord on the plastic clip near the vent.

LINE CORD INSTALLATION

CAUTION: CHECK POWER SUPPLY LINE VOLTAGE SELECTOR SWITCH. Set the 110/220 VAC selector on the power supply for the correct local line voltage. Check the selector setting before switching on the game.

10. Reinstall the rear door onto the cabinet and close it. Lock the rear door and remove the key. If required, install the extra padlock through the hasp at this time. Install the screws at the top and sides of the rear door and tighten snugly. Close and lock the cash box and coin doors.

NOTICE: Tamper resistant screws and matching wrench are provided with this game for additional security. Four tamper resistant screws and one wrench are located in the spare parts bag. If desired, replace the original screws with the tamper resistant screws. Tighten the screws firmly with the wrench.

11. Move the game to its intended location. Lower each leg leveler until the cabinet is stable and level. Adjust as required to raise wheels and distribute weight equally on each corner. Tighten the nuts.
12. Plug the game into a grounded (3-terminal) AC wall outlet. Switch ON the game, using the ON/OFF switch at the top left rear of the cabinet. The game will power up and begin self-diagnostics. If no errors are found, the game will automatically enter its "attract" mode of operation. Unlock and open the coin door. Locate the control switches. Press TEST MODE to enter the Menu System.
13. Perform a gun test on each shotgun. Access to this test is from the Diagnostic screen of game's Menu System. See Section Three for a detailed description of the Menu System. The gun test verifies that the shotguns function properly to allow normal game play.
14. If necessary, calibrate the shotguns. Access to the calibration feature is from the Utilities screen of game's Menu System. See Section Three. Calibration restores shotgun accuracy to original factory level of performance. Since player satisfaction depends on gun performance, you should recalibrate and test shotguns periodically.

MAINTENANCE

◆ Viewing Glass

It is not necessary to switch off power to the game to clean the glass. Apply a mild glass cleaner to a clean cloth or sponge. Use this to wipe the viewing glass. ***Do not apply the cleaner directly on the glass!*** Liquid could drip down into switch or motor circuits and cause erratic game operation.

◆ Cabinet

Use only non-abrasive cleaners to avoid damaging game graphics. Apply cleaner to a clean cloth or sponge. Use this to wipe the screen clean. ***Do not apply the cleaner directly on the cabinet!***

◆ Shotguns

Dirt or debris on a shotgun lens can affect accuracy. Apply the cleaner to a clean cloth or cotton swab, and then use this to wipe the lens clean. ***Do not apply cleaner directly into the gun barrel!***

SERVICING

Only qualified service personnel should perform maintenance and repairs. The following product guidelines apply to all game operators and service personnel. Notes, cautions and warnings appear throughout this manual where they apply. Read the SAFETY pages thoroughly before beginning service.

◆ Shotguns

Switch off power to the game. Unlock and open the coin door. Disconnect the shotgun cable from the wiring harness. Remove the locking nuts. Lift the gun cable mount off the front of the cabinet. Retain carriage bolts and nuts from the mount for reinstallation. Reattach the ground connection. Check that the gun cable rotates freely in its mount. Reinstall the carriage bolts. Tighten the locking nuts.

To disassemble a shotgun, lay the gun on a work surface and remove the screws. Separate the gun halves, beginning at the handle. Take care not to dislodge parts (the trigger is spring loaded.) Clean the lens to remove fingerprints and dust. If you removed any shields from the gun, reinstall them. After re-installation, verify that a good electrical connection exists between the shield and cable ground. Test the pump action to insure it does not bind. Always recalibrate a shotgun after servicing.

◆ Coin Mechanism

Switch off power to the game. Unlock the coin door and swing it open. To clean a coin mechanism or replace it with a different type, unlatch and remove it. After reinstallation, ensure that the mechanism seats fully in the holder. Close and lock the release latch, and then close the door. Turn on the game and change the mechanism setup. Test known good and bad coins to verify operation.

◆ Dollar Bill Validator

(Use MARS AE2411-U5 U.L. Recognized currency changer)

Dollar bill validators or other currency acceptors may be installed in games that were manufactured with the additional wiring connector factory installed. Switch off power to the game and unplug the A.C. line cord. Unlock the coin door and swing it open. Read the door label for additional information. Remove nuts, spacers, and the cover plate from the door. Change switch settings and make other adjustments before mounting the unit. If the manufacturer has supplied an adapter plate, place it over the door cutout. Install spacers on threaded studs. Align validator mounting holes with the studs. Seat the unit in the door opening. Install the nuts and tighten them firmly. Attach the ground wire (green with a yellow stripe) lug to the door ground stud next to the hinge. Mate the wiring harnesses. Press down on connectors to fully seat them. Route wires away from the door edges and hinge. Check for proper bill chute alignment. Plug in the line cord and turn on the game. Change the mechanism setup and pricing as required. Test known good and bad bills to verify proper operation. After you are satisfied with validator operation, close and lock the coin door.

Bill Acceptor Specifications

Pulse Width	50 mS minimum on; 50 mS minimum off
Pulses	1 pulse per dollar
VOL	0.4V @ 5mA
VOH	3.5V @ -0.4mA

◆ Coin Meter

Switch off power to the game. Unlock the cash door and swing it open. The meter is at the lower left corner of the door opening. Record the meter count before testing or replacement.

Insert a finger through the access hole under the cash tub. Locate the meter wires. Disconnect the harness at the connectors. Remove front screws and slide the meter out. Ensure that the replacement unit has a protective diode connected across the terminals to prevent driver circuit damage.

CABINET FRONT VIEW

EXTERNAL COMPONENTS

◆ **Viewing Glass**

Remove the screws from the top of the cabinet directly over the marquee. Lift the retaining strip of the cabinet. Tilt the glass slightly forward, grasp it firmly by its edges, and lift it out of the cabinet. The marquee artwork may be removed if required. Clean and inspect the lamp before reassembling.

◆ **Fluorescent Lamp**

Remove the screws from the rear lamp access panel. Unlock it and lift from the cabinet. Reach over the top of the assembly and grasp the tube. Give it a quarter turn and pull it out from its sockets. The electronic ballast in this assembly does not require a separate starter. Carefully place a new tube into the socket and rotate it a quarter turn to reinstall. Clean the tube to remove fingerprints and dust.

◆ **Fluorescent Light Assembly**

Remove the screws from the rear lamp access panel. Unlock it and lift from the cabinet. Disconnect the power cable from the fluorescent light assembly. Loosen but do not remove the fasteners holding the assembly to the cabinet. If present, remove the ground wire. Slide the assembly slightly forward to disengage the screws from the keyholes. Lift the assembly and guide it out of the cabinet.

WARNING: If you drop a fluorescent tube or a CRT and it breaks, it will implode! Use care in handling. Keep the item in its protective packaging until it is installed.

◆ **Speakers**

The grilles and the speakers come out from the front. Remove the screws and set the grilles aside. To avoid damaging a speaker, remove upper mounting screws first, and replace them last. Remove the speakers from the enclosure just enough to expose the terminals. Label and disconnect the wires. Refer to the Wiring Diagram (Section Four) for speaker wiring information. *Tighten screws snugly. Do not use excess force when removing or tightening screws threaded into plastic or particle board.*

◆ **Control Panel Switches**

Remove grilles and speakers. Label and disconnect wires. Separate the switch from its button housing. Bend the large prong away from the switch just enough to slide the switch off the housing. Unscrew the switch mounting nut and pull the entire button assembly out the front of the control panel.

◆ **Power Supply**

Switch off power to the game. Unlock and remove the rear door. Unplug the IEC A.C. connector from the rear and the D.C. connector from the front of the assembly. Remove two top and two bottom screws holding the supply to the power chassis, then lift it off the power chassis. Note voltage setting.

To install a power supply, remove the voltage switch cover if necessary and set the voltage to the correct value. Set the supply on the power chassis and align the mounting holes. Install the four screws and the two power connectors.

CABINET REAR VIEW

INTERNAL COMPONENTS

◆ **Monitor Bezel**

Remove the viewing glass. Grasp the monitor bezel at the bottom and lift it out of the groove.

◆ **Monitor**

Read these precautions thoroughly before beginning this procedure.

	WARNING: The video monitor is heavy, with most of the weight toward the front of the assembly. Be certain that it is firmly supported as it is removed from the cabinet.
	WARNING: The video monitor does not require isolation from the A. C. line voltage in normal game operation. However, when operating the monitor outside of the cabinet or servicing the monitor on a test bench, <i>you must isolate the monitor circuits from line voltage with an isolation transformer.</i>

Switch off power to the game. Unlock and remove the rear door. Disconnect the monitor from the wiring harness, remote adjustment board, and ground wires. Remove the retaining strip and the viewing glass. Remove the monitor bezel and both barrier panels. Remove the fasteners holding the monitor frame to the upper and lower mounting brackets. Pull the monitor carefully from the cabinet and set it in a safe place. Remove the remote adjustment board from the cabinet and reconnect it to the monitor before servicing or replacement. Clean the monitor face and the bezel before reinstalling.

◆ **CPU Fan Assembly**

Switch off power to the game. Unlock and open the rear door. To expose the CPU Board Assembly, remove the perforated metal cover from the game electronics. Disconnect the fan connector from the wiring harness. Remove fasteners and lift the fan assembly out of cabinet. Separate the mounting bracket from fan. Retain the bracket and the connector for reuse if a different fan must be installed.

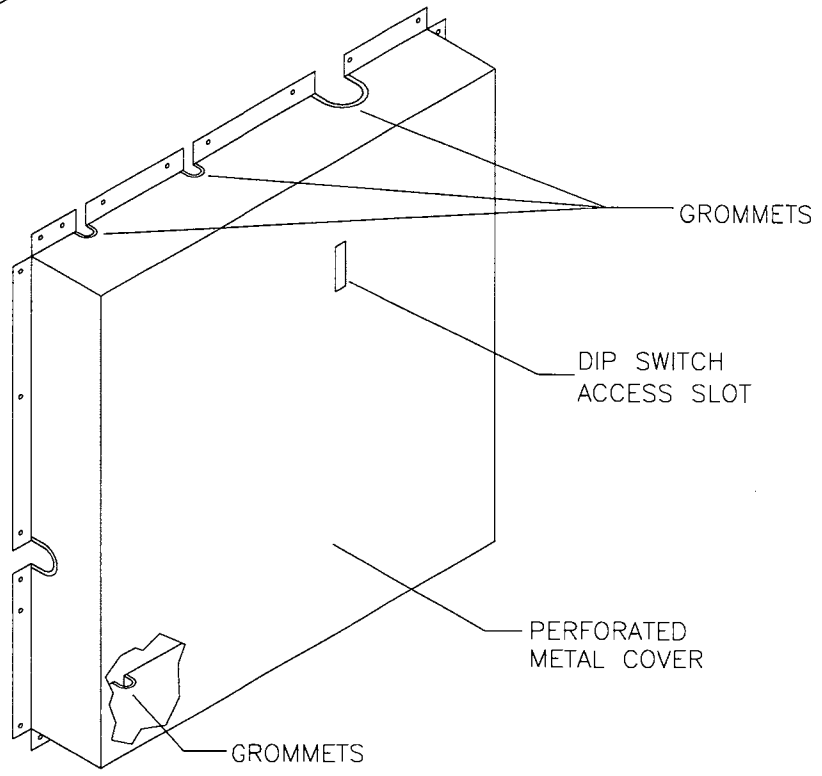

◆ **CPU Board Assembly**

Switch off power to the game. Open the rear door. To expose the CPU Board Assembly, remove its perforated metal cover. Carefully note the orientation of the JAMMA connector and the other cables. Extract the harness and the hard disk drive ribbon cable from the board connectors. Remove CPU Board Assembly mounting screws. Lift the board out of the cabinet and set it in a safe place. Use anti-static bags or protective containers from new parts to store boards that you don't plan to reinstall.

◆ **Gun Interface Board Assembly**

Switch off power to the game. Unlock and remove the rear cabinet door. To expose the Gun Interface Board Assembly, remove the perforated metal cover. Disconnect the wiring harness and the fuses from the interface board assembly. Remove two large and two small screws holding the board assembly in place and retain them along with their washers. Lift the board out of the cabinet and set it in a safe place. Set the replacement board assembly over the CPU board, align the holes and install the screws, small ones first. Reinstall the fuses and reconnect the wiring harness to this board.

GAME ELECTRONICS

INTERNAL COMPONENTS

◆ **Hard Disk Drive**

Use an anti-static bag and approved shipping container (P/N 08-8068) to return the hard disk drive assembly to your distributor. Switch off power to the game. Unlock and remove the rear cabinet door. Remove the perforated metal cover over the game electronics. Disconnect the D.C. power cable from the hard disk drive. Unplug the ribbon cable from the hard drive and leave it attached to the CPU Board. Carefully loosen the screws and lift the drive assembly out of its mounting bracket. Remove the screws and reuse them if a different hard disk drive assembly is to be installed.

NOTICE: Hard disk drives are very fragile! Handle them with care. Do not stack or drop hard disk drives. Keep the disk drives away from magnets, heat and vibration.

◆ **Memory**

The ROM (Read Only Memory) circuits contain the computer operating instructions for this game. Switch off power to the game. Unlock and remove the rear door. Remove the perforated metal cover. Carefully note the Integrated Circuit position, then remove the device with a chip extraction tool. To reinstall memory circuits, orient the device over its socket and press firmly to seat pins. *Do not force.*

CAUTION: Static electricity builds up on your body. This static can damage or destroy sensitive the game circuits. **BEFORE** touching or handling electronic assemblies, discharge static electricity by touching the power supply chassis.

◆ **Battery**

Switch off power to the game. Unlock and remove the rear door. Remove the perforated metal cover. Carefully note the battery position, then gently lift the contact arm to release tension. *Do not bend the arm with excess force.* Slight finger pressure may be needed to pry the cell from its holder. Slide the battery out and remove from the cabinet. *Avoid direct shorts across terminals or terminals to ground.*

CAUTION: Danger of explosion if battery is incorrectly installed. Replace only with the same or equivalent type as recommended by the manufacturer. Dispose of used batteries according to instructions printed on the battery or the manufacturers packaging.

GAME OPERATION

STARTING UP

Whenever you turn on the machine or restore power, the system executes boot ROM code. The boot ROM contains self-diagnostic tests. These tests automatically verify and report the condition of the disk drive and other hardware. The screen is blank during these tests. If the hardware fails a test, the system displays an error message. The message appears for 30 seconds or until someone presses a button.

- If nobody presses a button, the system quickly completes tests, and then loads game software.
- To skip boot ROM tests and activate the Menu System, press and hold the TEST MODE button.

Having passed power-up tests, the system enters Attract Mode. Attract Mode consists of typical game scenes and sounds, alternating with high scores. Attract Mode continues until game play commences.

Players insert currency to start the game. Then they select a CarnEvil territory. As a player chooses a shotgun, the player also selects a character. The game identifies one character with green shotgun blasts. The game associates the second character with purple shotgun blasts. Each character receives a starting health level. Play begins after a countdown period. The game progresses until players exhaust their characters' health. If players choose not to continue, then the system returns to Attract Mode.

GAME RULES

ONE OR TWO PLAYERS

The player or players insert currency to start the game. Each player chooses a gun and presses the nearest START button. At the CarnEvil ticket booth, either player selects a territory to begin an adventure. Indicator bars at the sides of the screen track remaining ammunition for each player.

PLAYER CONTROLS

◆ START Buttons

These buttons allow players to begin or continue play.

◆ SHOTGUNS

Use a shotgun to shoot killer clowns and other enemies. Also use a shotgun to shoot player health and gun-upgrade symbols. To reload the gun, pump it or shoot off-screen.

SHOTGUN PARTS

OPERATOR CONTROLS

CABINET CONTROLS

- ◆ **The DIP Switches** are beneath the monitor, on the main PC board. Access these switches by opening the rear door. DIP switches set some system variables. You can set other variables with control switches.
- ◆ **The Monitor Remote Control Board** is beneath the monitor, on the rear cabinet wall. Open the coin door to access controls. Use monitor controls to adjust the video display for optimum viewing.
- ◆ **The POWER Switch** is at the rear of the cabinet. If you stand behind the cabinet, you'll find the switch on the top-right side. This switch turns off the game, but does not reset game variables.

CONTROL SWITCHES

- ◆ **The SERVICE CREDITS Button** is behind the coin door, on a rear wall bracket. This button allots credits without changing the game's bookkeeping total.
- ◆ **The TEST MODE Button** is behind the coin door, on a rear wall bracket. Actuating TEST MODE causes the game to enter the menu system. Press the TEST MODE button briefly to run automatic tests. To make changes, press and hold TEST MODE until the system menu appears.
- ◆ **VOLUME DOWN and VOLUME UP Buttons** are behind the coin door. You'll find them on a rear wall bracket. These buttons set game sound levels. To make minor changes, press either button briefly. To make major changes, press and hold a button.

	NOTICE: You must adjust Attract Mode volume independently of Game Mode volume. For greater profits, increase volume levels to draw attention to this game.
	NOTICE: To reach control switches, unlock and open the coin door.
	NOTICE: The 25-inch CarnEvil machine has no factory-installed tilt switch.

GAME FEATURES

CarnEvil is a dark, gloomy, 3-D horror movie, and the player is the ultimate hero. The player must battle up to 40 terrifying villains, each with its own threatening capabilities. Among these are killer clowns, murderous mimes, a savage Santa, marauding maggots and jugular Junior.

Deep within CarnEvil lurk many territories, each with unique, blood-curdling perils and sinister secrets. CarnEvil proclaims a sardonic welcome to its every dank domain. Players dare to enter the Haunted House, Rickety Town or the Freak Show. Skill, craft and discipline earn entry into elite domains, such as the bestial Big Top. Here CarnEvil challenges the superior player to a heightened play level.

For the intrepid player, a blazing shotgun is the only way out. The player must remember this essential rhythm: Pump and fire, pump and fire! Then the player moves cautiously forward, flushing out gruesome enemies that never see the daylight.

Threatened by killer clowns, bats, spiders, freaks and others, the player must exterminate them all. If an enemy draws blood, then the player's health declines. The player achieves extra points by eliminating ravenous villains before they devour the heroine. Yet should a misplaced shot dispatch the lovely heroine, the player pays a penalty.

As play commences, the gun fires single shots, like a pistol. Shooting bullet-shaped symbols upgrades the player's weapon. Upgrades allow the gun to temporarily become a full-fledged shotgun or a machine gun. In all gun modes, the player must periodically pump the gun to reload it. Another way to reload the gun is to aim off screen and press the trigger. The player improves his health by shooting heart-shaped symbols. Then, restored and fortified, the player dares to plunge forth into the next, nightmarish territory.

The screen displays and constantly updates player scores. As players exit a territory, the screen indicates shooting accuracy percentages for each player. As each play level concludes, top scorers may enter initials or names with a shotgun. CarnEvil displays these initials in a high score table.

SECTION TWO

DIAGNOSTIC, AUDIT & ADJUSTMENT MENU SYSTEM

NOTICE: Information in this manual is subject to change without notice. MIDWAY reserves the right to make improvements in equipment function, design, or components as progress in engineering or manufacturing methods may warrant.

MENU SYSTEM

AUTOMATIC TESTS

Whenever you switch the game between Play Mode and the menu system, the self-test routine activates. This routine, which isn't part of the menu system, runs automatically. Its purpose is to detect faults that prevent the game or menu system from operating properly. Messages appear on the screen as each item runs. These messages may describe detected errors. A self-test usually takes less than one minute to complete. Write down messages before proceeding to the menus or game play.

OPERATOR-SELECTED TESTS

The game's menu system includes a number of operator-selected, manual tests. In this system, a series of on-screen menus presents game variables and diagnostics. The Main Menu screen allows you to view information, make changes, or verify equipment operation. Each submenu screen displays one group of choices. A Detail Menu presents data or runs the required test. You must be at the Detail Menu level to detect errors, make changes, or activate tests.

SCREEN LAYOUT

Menu screens differ, but presented material remains in the same location each time.

- ◆ The color bar at the top center of each screen displays the current menu title.
- ◆ Data (menu items, video signals, statistics, reports, etc.) appears in the center of the screen.
- ◆ Messages (explanations, control functions, revision levels) display at the bottom of the screen.

MENU SYSTEM ORGANIZATION

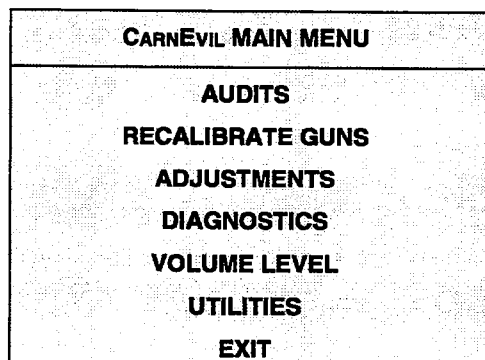

You must activate the menu system manually. To play the game, you must also manually exit from the menu. Main Menu items appear in categories: Tests, statistics, audits, adjustments, etc.

- ◆ Tests verify proper equipment operation.
- ◆ Statistics and audits allow you to assess and customize game performance.
- ◆ Adjustments help you to customize game performance. For instance, you can restore factory default game settings. You can also calibrate player controls for accuracy.

Submenu screen items offer you choices within a category. Some items have no submenu, while others may have more than one. You can return to the previous menu or go on to the next menu.

Detail Menu screen items contain specific information. You must interact with the system to achieve results or make changes. You can always return to previous menus from Detail Menu screen items.

Control functions appear on a menu screen. Use VOLUME UP and VOLUME DOWN buttons to highlight an item on any menu. (These buttons are inside the coin door.) *You can only select one highlighted item at a time.* To select a highlighted item, press the TEST MODE (rightmost) pushbutton inside the coin door. To return the game to play, highlight "EXIT," then press TEST MODE.

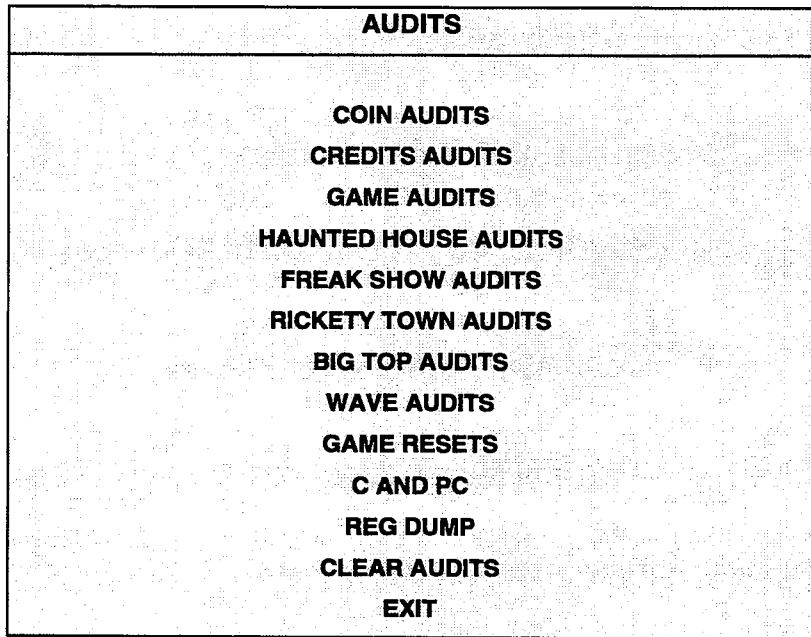

MAIN TEST MENU

AUDITS

Select "AUDITS" at the CarnEvil Main Menu. The Audits menus permit you to review game play statistics. Additional menus give detailed reports for each player position on game starts, ends, cabinet abuse, fault conditions, etc.

Highlight a line item with the middle two control buttons inside the coin door. Select the option with the right control button. The screen displays a list of the statistics available to you. Select an item to view the detailed report.

AUDITS SUBMENU

Data in the Audits menus helps you to keep records of the game's popularity and earning potential. Each entry on the Audits Submenu is the subject for an entire screen of bookkeeping information. Use the highlight bar to select the desired subject.

Examine and record all game audit values before performing game service or repairs.

NOTICE: Be careful when clearing audit information. Once you clear data, you cannot restore it.

COIN AUDITS

Select "COIN AUDITS" at the Audits Menu. The Coin Audits menu permits you to assess the currency collection. This report screen presents revenue quantities and other important game statistics.

Highlight a line item with the middle two control buttons inside the coin door. Select the option with the right control button. A menu screen appears as below.

COIN AUDITS SUBMENU

The Coin Audits submenu reports total quantities of coins, bills or credits collected by each active device. The submenu does not calculate the value of the collected currency.

This screen reports information, but does not permit you to make changes. To reset the coin, bill, and credit counters to zero, use the Clear Audits menu.

We recommend that you examine and record audit information before you make changes. Once you've cleared the counters, you can't retrieve the previous data from the system.

CREDITS AUDITS

Select "CREDITS AUDITS" at the Audits Menu. The Credits Audits menu permits you to assess the currency collection. This report screen presents revenue quantities and other important game statistics.

Highlight a line item with the middle two control buttons inside the coin door. Select the option with the right control button. A menu screen appears as below.

GAME AUDIT SUBMENU

The Game Audits menus report information but don't permit you to make changes. Examine and record information at GAME AUDITS before deleting data at CLEAR AUDITS.

LSW, TLF, SBLF, etc. are terms for internal record keeping counters used in this game.

CLEAR AUDITS

Select "CLEAR AUDITS" at the Audits Menu. The Clear Audits menu allows you to clear individual memory counters or to reset them all at one time.

Highlight a line item with the middle two control buttons inside the coin door. Select the option with the right control button. Options may be reset to factory defaults or changed after each viewing.

CLEAR COIN AUDITS
CLEAR CREDITS AUDITS
CLEAR HAUNTED HOUSE AUDITS
CLEAR FREAKSHOW AUDITS
CLEAR RICKETY TOWN AUDITS
CLEAR BIG TOP AUDITS
CLEAR WAVE AUDITS
CLEAR GAME RESETS
CLEAR C AND PC
CLEAR REG DUMP

EXIT

CLEAR AUDITS SUBMENU

You can reset any audit screen from the Clear Audits submenu. Choose any item to return the counters to zero.

- **Game Resets** keeps track of how the game responds to different player maneuvers.
- **C and PC** is an internal record-keeping list used to monitor game performance.
- **Clear All** simultaneously changes all audit categories to factory default values.

After you select an item, the game gives you the opportunity to escape from this change. For example:

ARE YOU SURE YOU WANT TO CLEAR COIN AUDITS?	
YES	NO

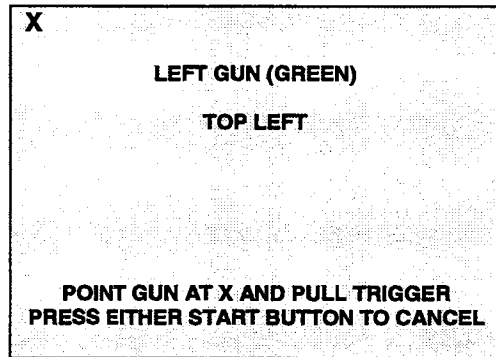

LAST CHANCE SUBMENU

Once you've selected and verified a clear function, the values reset and you can't restore them. We recommend examining and recording all utility values before making changes.

	NOTICE: Be careful when clearing audit information. Once you clear data, you can't restore it.

RECALIBRATE GUNS

Select "RECALIBRATE GUNS" at the CarnEvil Main Menu. Shotgun recalibration restores shotgun accuracy to original software performance. Of course, shotgun performance also depends on the condition of your game hardware. Since player satisfaction depends on gun performance, you should recalibrate and test shotguns periodically.

GUN CALIBRATION SCREEN 1

The Gun and Monitor Calibration screen opens. Now highlight "Gun Calibration." Again, select the option with the right control button. The Calibrate Guns screen opens. Turn room lights down to reduce glare that may interfere with gun operation. Before calibrating shotguns, examine shotgun barrels for dirt or debris. No amount of calibration and testing can fix a dirty optical system. The same rule applies to blown gun fuses, loose components, defective cables, etc.

GUN CALIBRATION SCREEN 2

The screen specifies which gun to shoot. To avoid miscalibration, the other gun temporarily becomes inactive. Stand directly behind the shotgun holder and extend the cable to its full length. An "X" appears at the top-left corner of the screen. Aim precisely, so that the gun sight aligns with the "X." Fire the gun at the "X."

A second "X" appears at the bottom-right screen corner. Again, fire the gun at the "X." When you're done, return to the previous menu by pressing the left START button. Maintain maximum earnings by testing and recalibrating guns often.

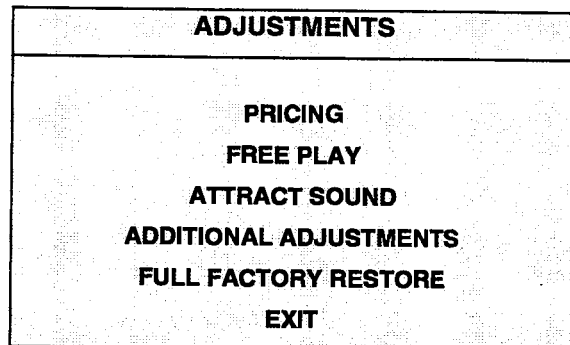

NOTICE: Bright overhead lights occasionally interfere with optical gun operation. To eliminate this interference, reduce light levels and recalibrate the shotguns.

ADJUSTMENTS

Select "ADJUSTMENTS" at the CarnEvil Main Menu. The Adjustments menus permit you to change game characteristics. Use these screens to optimize game performance and earnings.

Highlight a line item with the middle two control buttons inside the coin door. Select the option with the right control button.

ADJUSTMENTS SUBMENU

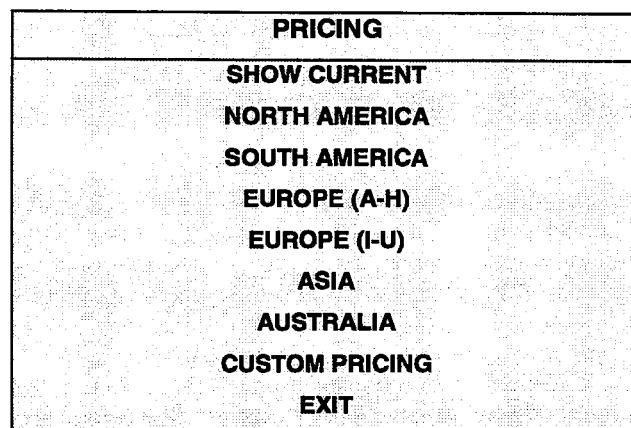

PRICING

Select "PRICING" at the Adjustments Menu. The Pricing menus allow you to view current settings or change the cost of games. Custom pricing allows you to select the number of coins or credits required for each game. The game restores factory default values if you exchange the CPU Board or if the backup battery fails.

Highlight a line item with the middle two control buttons inside the coin door. Select the option with the right control button. You may reset options to factory defaults or change an options after viewing it.

We recommend examining and recording all pricing options before making changes.

You may save several custom prices and then choose between them as needed. Instructions for creating new price settings appear on the screen in sequence to guide you through the custom process.

PRICING SUBMENU

An additional box appears on screen to explain the available functions as you select each item.

CURRENT PRICING SUBMENU

Select "SHOW CURRENT" at the Pricing Menu. The following definitions clarify the adjustments in the Pricing menus...

SCREEN TERM	DEFINITION
Slot or Bill Units	Inserted coins and bills accumulate units. This adjustment specifies the quantity of units given for each coin or bill in each position ("unit" is an arbitrary term).
Units per Credit	This number establishes the value of each credit for pricing calculations.
Units per Bonus	Units awarded after a player has accumulated enough points for a bonus.
Minimum Units	No credits will be awarded until this many coin or bill units have accumulated.
Credits to Start	Credits needed to begin game play. This sets the basic cost per game.
Credits to Continue	Credits required to continue a game which is already in progress.
Maximum Credits	Sets limits on the number of credits that the game will accept.
Coins per Bill	Establishes value for bills by comparing them to an equivalent number of coins.

ADDITIONAL ADJUSTMENTS

Select "ADDITIONAL ADJUSTMENTS" at the Adjustments Menu. Additional Adjustments menu items allow you to set the game to match player requirements. These adjustments affect speed, challenge, rewards, etc. that determine player enjoyment.

Highlight a line item with the middle two control buttons inside the coin door. Select the option with the right control button.

ADDITIONAL ADJUSTMENTS SUBMENU

Game Difficulty has several levels. Choose the level that most closely matches the skills of the players.

Player Starting Health and **Monster Strength** affect game difficulty. Game difficulty, in turn, determines total game time.

High Score Autograph and **Show Score** provide incentives to good players.

Violence is an operator-programmable variable. You may remove it from the game without affecting other game play characteristics.

Pump on Screen affects game difficulty and game time. Enable Pump on Screen to allow the player to use the pump to reload.

Flash Brightness affects gun operation. This is the same setting as FLASH BRIGHTNESS on the Gun Test. (See the Adjustments Menu.) If you set flash brightness too low, the guns may not operate. If set too high, flash brightness might irritate players or reduce monitor life. This adjustment's range is .01 to .99. For new CRTs, the recommended setting is .50. Increase flash brightness by repeatedly pressing PLAYER 2 START. Decrease flash brightness by repeatedly pressing PLAYER 1 START. Save your setting and exit the Gun Calibration screen by pressing CREDIT or TEST MODE. When you exit this screen, the system also saves your other gun calibration settings.

Big Baby is an optional game enemy. You may remove the baby from the game without affecting other game play characteristics.

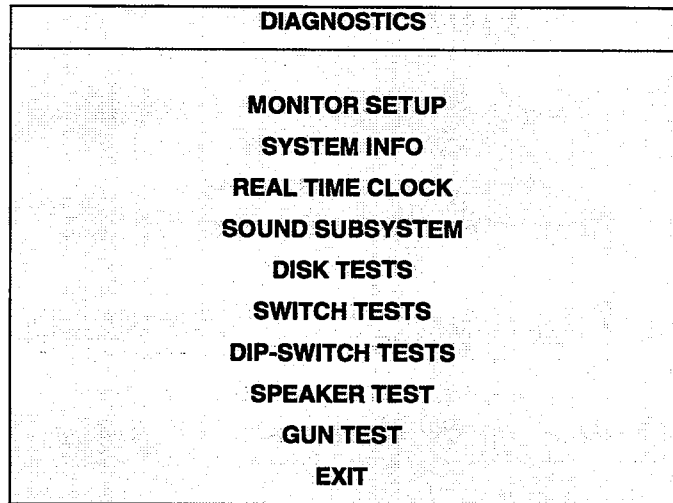

Reset High Scores allows you to clear the high score table.

Recalibrate Guns assists you in restoring shotgun accuracy to original software performance. Details on use appear later in this chapter.

DIAGNOSTICS

Select "DIAGNOSTICS" at the CarnEvil Main Menu. Diagnostic tests allow you to verify the condition of the electrical and electronic hardware in the game.

Open the coin door. Use four control pushbuttons inside the control section of the cabinet to choose line items. Each line item is the title of a submenu. The leftmost button (SERVICE CREDITS) recalls the previous menu. The second-left button (VOLUME DOWN) moves the item highlight bar upward. The second-right button (VOLUME UP) moves the item highlight bar downward. The rightmost button (TEST MODE) calls up a submenu. The screen displays this submenu. Use the same steps to activate any one of the line items listed.

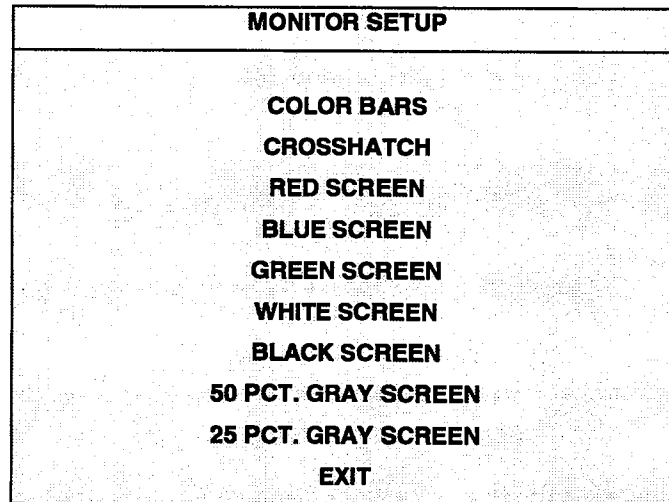

DIAGNOSTICS SUBMENU

MONITOR SETUP

Select "MONITOR SETUP" at the Diagnostics Menu. The Monitor Patterns routine provides test screens to verify monitor performance or make adjustments.

Highlight a test with the middle two control buttons inside the coin door. Select the option with the right control button.

MONITOR SETUP SUBMENU

Color Bars fills the screen with colored stripes. Use the color bars to help you to check or adjust monitor brightness and contrast. The color bars also expose defects in horizontal linearity. Each color bar consists of 32 intensity levels. On a properly adjusted monitor, the top 31 of these levels are visible. Each bar should appear sharp, clear, and distinct from bars on either side. Incorrect adjustment can cause missing detail at the top or bottom of a bar. Bent bars indicate horizontal linearity flaws, such as pie crust, pincushion or barrel distortion. (*Correct color bar colors, left to right: Red, Green, Blue, Black, White, Cyan, Yellow, Violet.*) Set controls as follows: 1. Adjust BRIGHTNESS and CONTRAST to minimum. 2. Turn up BRIGHTNESS until the pixels in the black stripe begin to glow (turn dark gray). 3. Bring up the CONTRAST control until you can see 31 bars.

Crosshatch Patterns fill the screen with a grid and a series of dots. Crosshatch Patterns help you to check or adjust several monitor parameters: These include convergence, linearity, active viewing area and dynamic focus. The grid and the dots should be all white in color, with no fringes or parallel images. The lines should be straight and the dots round. For more detail on these adjustments, consult service literature from the monitor manufacturer.

Color Screen tests fill the screen with 100% of the chosen color at normal intensity. The Color Screen tests help you to check or adjust monitor intensity, black level, blanking and color purity. Each screen should be absolutely uniform from top to bottom and side to side. No retrace lines or noise should be visible. Color Screens may not hold their uniformity if the monitor degaussing circuit is defective.

White, Gray, and Black Screens fill the screen with black, gray or white at various intensities. These monochrome screens help you to check or adjust monitor convergence, purity, contrast and intensity. These screens also simplify black level and color gun control settings. The screens should be uniform with no color tints or distortion. No retrace lines or noise should be visible.

If tests indicate a need for adjustment, use controls on the Monitor Remote Adjustment Board.

SYSTEM INFORMATION

Select "SYSTEM INFO" at the Diagnostics Menu. The System Information Menu provides the current version numbers of this game's hardware and software. Use these numbers to describe the system during parts replacement, service calls, etc.

Highlight a test with the middle two control buttons inside the coin door. Select the option with the right control button.

SYSTEM INFORMATION
<p>MIDWAY GAMES, INC. SEATTLE SYSTEM</p> <p>SERIAL NUMBER: XXXXXXXXX GAME: CARNEVIL DATE OF MANUFACTURE: XX/XX/XX</p> <p>PRESS CREDIT OR TEST TO EXIT</p>

SYSTEM INFORMATION SUBMENU

The System Information screen reports information but does not permit you to make changes. The Title line identifies the manufacturer of this game and the electronic board set used in this product. The Serial Number, Game, and Date of Manufacture identify the game name and production run.

REAL TIME CLOCK

The game's real-time clock provides the current date and time. This screen also allows you to adjust the clock. You may adjust for time zone changes, clock resets, backup battery replacements, etc.

Highlight a test with the middle two control buttons inside the coin door. Select the option with the right control button.

REAL TIME CLOCK
<p>DISPLAY SET</p> <p>EXIT</p>

REAL TIME CLOCK SUBMENU

The real-time clock provides accurate, time-stamped game statistics. The clock does not affect game operation. Once set, the clock runs until the battery fails, or service or some major fault disrupts circuits. Periodically examine the top lines of the SELF TEST screen for the correct time and date.

SOUND SUBSYSTEM TEST

Select "SOUND SUBSYSTEM" at the Diagnostics Menu. Sound Subsystem Tests verify that audio components are connected and operate properly.

Highlight a test with the middle two control buttons inside the coin door. Select the option with the right control button.

NOTICE: To test the speakers thoroughly, increase the volume level. Check the volume setting before testing. Before returning to Game-Over Mode, reset the volume level to its original setting.

SOUND SUBSYSTEM SUBMENU

Version, Status, Checksum, and RAM Reports are diagnostic routines. These routines analyze the digital sound circuits, and can detect sound memory problems. Test results appear as numbers or messages. Sounds may also accompany some tests. Reports other than GOOD or OK indicate a problem.

DISK TESTS

Select "DISK TESTS" at the Diagnostics Menu. Disk Tests allow you to verify proper operation of the hard disk drive assembly.

Highlight a test with the middle two control buttons inside the coin door. Select the option with the right control button.

DISK TESTS SUBMENU

Disk Information

The Disk Information routine verifies the interface between the CPU Board Assembly and hard disk drive. The processor requests disk information. Data cannot be retrieved successfully if there is a problem.

Sequential Disk Read

This routine tries to access every bit of data in the order it is stored directly on the disk. The hard disk drive media may be defective if this routine cannot be completed successfully.

Sequential Cache Read

This routine tries to access every bit of data in the order it is stored in the temporary disk memory cache. If this test is not successful, the memory circuits may be faulty.

Random Disk Read

This routine tries to access every bit of data in no particular order directly from the disk. This test may detect problems with ability to position the drive heads accurately over the requested data.

Random Cache Read

This routine tries to access every bit of data in no particular order from the temporary disk memory cache. If the cache fails this test, memory circuits may contain a fault.

Data Integrity Test

This test analyzes the data on the disk drive. The test determines if corrupted data is on the disk. Bad data can cause the program to falter even though the hard disk operates correctly.

File System Check

This routine performs a file-by-file check of the data stored on the hard disk.

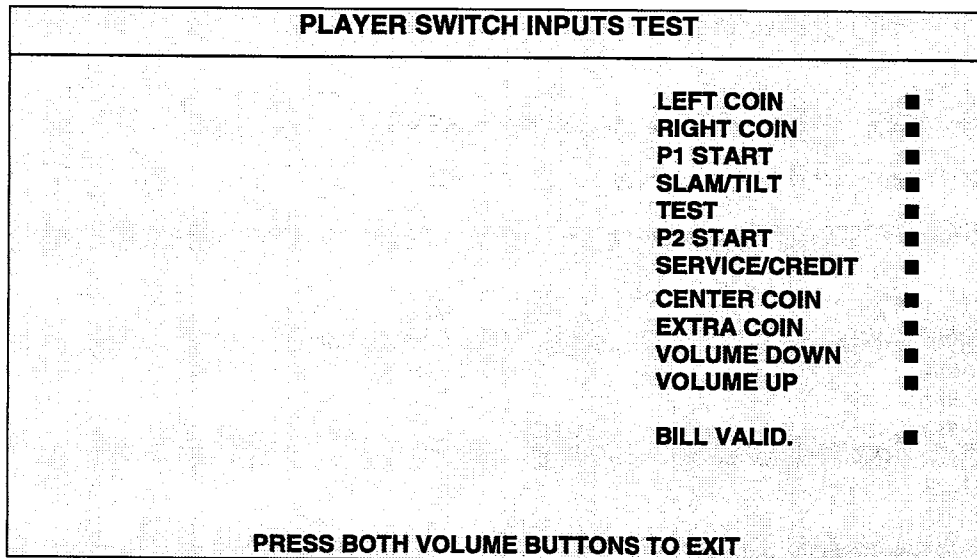

Surface Scan

The magnetic material on the disk can become damaged, causing data to be unreadable. This routine locates unusable areas on the disk and marks them for future reference.

SWITCH TESTS

Select "SWITCH TESTS" at the Diagnostics Menu. Switch Tests verify proper operation of the game's switches, including buttons and shotgun switches.

Activate each switch, and the indicator on the screen changes state. Release the switch and the indicator returns to its previous, normally open or closed condition. Switches may be tested in any combination. To exit the test, simultaneously press the middle two control buttons inside the coin door. The Switch Test Screen refers to these buttons as "volume buttons."

SWITCH TEST SCREEN

Switches appear on the screen as colored boxes. Red boxes indicate an open state. Green indicates closed. Any other color indicates a fault condition. A single indication on the menu screen should exactly duplicate a button or shotgun change. You'll notice a unique number for a switch recognized by game electronics.

Use Player Controls Tests to verify crossed wires, intermittent conditions, and stuck switches.

	NOTICE: Some switches may not be used with this game. If you can't find one of the listed switches, check the wiring diagram.
---	--

DIP-SWITCH TESTS

Select "DIP-SWITCH TESTS" at the Diagnostics Menu. Two 8-position DIP switch banks reside on the CPU Board. DIP-Switch Tests allow you to check the position of the 16 switches in these banks. You can change the setting of any DIP switch without removing the CPU cover.

Highlight a test with the middle two control buttons inside the coin door. Select the option with the right control button. The screen displays an illustration of each switch block and the current settings.

You can change DIP-switch positions with power on. Set any switch, and then check the screen to verify that the new setting is enabled. Country switch settings have no effect if the CMOS Coinage Control is set to On.

Refer to the charts for assistance in choosing switch positions (* indicates factory defaults). To exit the DIP-switch Test, press the left control button (inside the coin door).

SPEAKER TEST

Select "SPEAKER TEST" at the Diagnostics Menu. The SPEAKER TEST provides audio signals to test the loudspeakers.

Use tests on the Speaker Test menu to verify operation of audio system components. Highlight a test with the middle two control buttons inside the coin door. Select the option with the right control button.

SPEAKER TEST SUB-MENU

The channel subtests use voices to verify speaker locations. Use the 100 Hz tone to check the speakers' base response.

The PLAY TUNE subtest uses game sounds to check that speakers are correctly phased. "Muddy," weak or distorted sound during this test may indicate crossed wires or out-of-phase speaker connections.

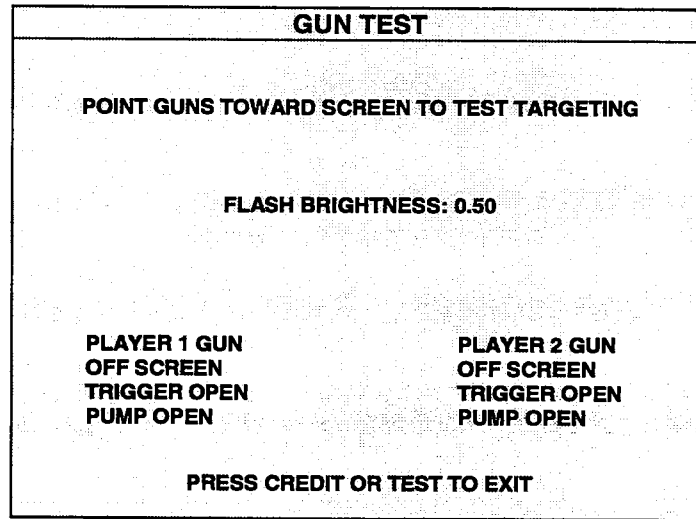

NOTICE: Check the volume setting before testing. Increase the volume level to fully test the speakers. Remember to restore the volume to its previous level before returning to Game-Over Mode.

GUN TEST

Select "GUN TEST" at the Diagnostics Menu. The Gun Test allows you to check targeting and basic gun operation. Inaccurate firing discourages players quickly and reduces repeat game play.

	<p>NOTICE: To recalibrate and verify shotgun accuracy, use the "Recalibrate Guns" option on the CarnEvil Main Menu.</p>
---	--

Perform the Gun Test on each shotgun separately. Player 1 shotgun test results appear in green lettering on the screen's left side. Player 2 results appear in purple on the right. Aim a shotgun at the screen. The Targeting subtest indicates when the gun moves on or off the screen. The trigger subtest senses when the triggers opens and closes. The Pump subtest detects when the pump opens and closes.

GUN TEST SCREEN

SHOTGUN PARTS

Flash Brightness affects gun operation. This is the same setting as FLASH BRIGHTNESS on the Additional Adjustments Menu. (See the Adjustments Menu. Early versions of game software also refer to the setting as GAMMA.) If you set flash brightness too low, the guns may not operate. If set too high, flash brightness might irritate players or reduce monitor life. This adjustment's range is .01 to .99. For new CRTs, the recommended setting is .50. Increase flash brightness by repeatedly pressing PLAYER 2 START. Decrease flash brightness by repeatedly pressing PLAYER 1 START. Save your setting and exit the Gun Test screen by pressing CREDIT or TEST MODE.

VOLUME LEVEL

Select "VOLUME LEVEL" at the CarnEvil Main Menu. Music plays continuously with the Volume Level screen. Use the volume buttons on the control switch bracket to change the sound level of the game. (These are the middle two buttons, inside the coin door.) Press the right control button to save the volume level and return to the Main Menu.

VOLUME LEVEL SCREEN

Loud games attract more player interest than games with low-level sound. The Attract Mode sound level is lower than the game play sound level.

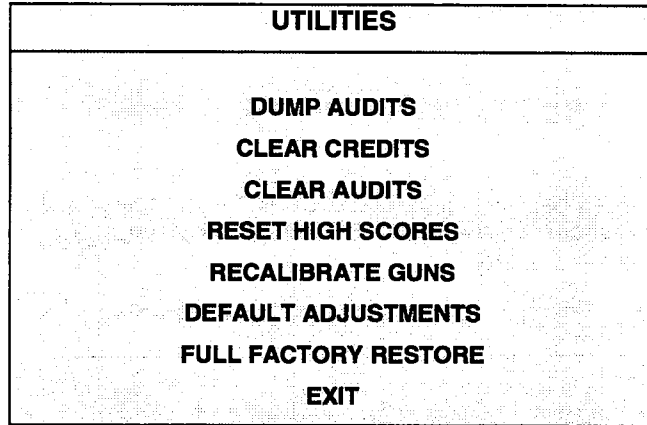

Attract Mode sound can be turned on or off without changing the game volume level (see Adjustments).

	<p>NOTICE: These adjustments affect the volume of tests as well as of game play. If you set volume levels to minimum (zero), the speakers are silent during audio tests. We recommend setting volume levels to a moderately high value whenever you perform sound tests. After you complete tests, you may return sound levels to previous settings.</p>
---	---

UTILITIES

Select "UTILITIES" at the CarnEvil Main Menu. Utilities menu items allow you restore game operation to original software performance. Of course, game performance also depends on the condition of game hardware.

Highlight a line item with the middle two control buttons inside the coin door. Select the option with the right control button.

UTILITIES SUBMENU

Dump Audits allows you to replace current audit data with previously saved data.

Clear Credits opens a menu that allows you to zero the game's credit data. Examine and record audit information before you make changes.

Clear Audits opens a menu that allows you to zero the game's audit data.

Reset High Scores permits you to delete player names and scores that appear in the Attract Mode. This feature may be useful if players insert inappropriate language into the high score table.

Recalibrate Guns opens a menu that allows you to fine-tune shotgun accuracy. You should periodically recalibrate and test the shotguns. Players appreciate accurate weapons.

Default Adjustments opens a menu that allows you to reset game adjustments to factory settings.

Full Factory Restore allows you to reset game adjustments and audits to factory settings.

	NOTICE: Be careful when clearing audit information. Once you clear data, you can't restore it.

2. Jumper is not required for versions 01-05 of this CPU Board. Jump pins 1 & 2 for version 06 and up.
3. Jumper changes for some sizes and types of ROM. Jumper positions shown in ROM kit instructions.
4. Jumper is not required for any version of this CPU Board. These pins are not present on CPU Board.
5. Jumper is not required for production video monitors. Jump pins 1 & 2 for positive sync type monitors.

CARNEVIL™

SECTION FIVE

TROUBLESHOOTING

CAUTION: This game uses complex electronic components that are very SENSITIVE to static electricity. Observe the following precautions before handling game electronics. Failure to do so may void the warranty and could damage electronic assemblies.

1. Before servicing electronics, turn off A.C. power to the game. Wait for capacitors to discharge.
2. BEFORE touching or handling electronic assemblies, discharge static electricity on your body. To discharge this static, begin by connecting the line cord to a properly grounded outlet. Don't turn on the game! Next, touch the safety ground stud of the power supply chassis.
3. Store electronic assemblies in an anti-static area. Use anti-static bags to store or transport the game CPU Board assembly. Transport the Hard Disk Drive in its container.
4. DO NOT remove or connect any electronic assemblies when the cabinet power is ON. Doing so will damage electronic assemblies and void the warranty.
5. Replace ground wires, shields, safety covers, etc. after you complete maintenance or service. Install and firmly tighten all ground and mounting screws.

<p>GAME DOES NOT START</p> <ul style="list-style-type: none"> • Game appears completely non-functional. • No audio • No illumination • No video display 	<ol style="list-style-type: none"> 1. Check that Power Switch is ON on game power supply. 2. Turn OFF game power. Unplug A.C. line cord. Examine power supply fuse or circuit breaker. Power Line Voltage Switch must be set to agree with local A.C. line voltage. 3. Remove line cord from power supply. Test line cord, power plug, and I.E.C. connector for breaks or damage. Verify continuity of each wire in cord. Ensure that supply connector is good. Fully seat I.E.C. connector into mating receptacle of power supply. 4. Unlock and remove rear cabinet door. Swing door out until it rests on chains. Ensure that cabinet wiring harness connectors fully seat in corresponding power supply and CPU Board assembly. 5. Fully seat A.C. plug in power outlet. Verify presence of A.C. line voltage. Turn game power ON. If fuse opens again, check D.C. wiring harness and connectors.

<ul style="list-style-type: none"> • Video game appears non-functional. • Currency acceptor price indicator is illuminated. 	<ol style="list-style-type: none"> 1. Unlock and open rear cabinet door. Inspect CPU Board assembly under low-light conditions. Light emitting diodes glow if processor circuits receive voltage. Fan should also be operating. These indications prove presence of some D.C. from power supply. Still, voltages or signals may not be normal. 2. Turn OFF game power. Inspect CPU Board assembly. Ensure that JAMMA Wire Harness connector is attached and fully seated onto mating board connector. Verify connection of monitor A.C. power. Check on wiring harness connectors in same way. 3. Verify that game CPU DIP Switches are set as intended. 4. Turn ON game power. Using 20 Volt D.C. setting on digital voltmeter, measure D.C. voltages present at power connector pins. Adjust +5V source if necessary. 5. Using 2-volt A.C. setting on digital voltmeter, measure same D.C. voltages as above. Any reading here indicates that supply voltages are unstable and may contain ripple or noise. 6. Verify that game runs and completes power-up self-test sequence without any errors. Note errors or failures during these tests (Game doesn't save error messages). 7. Enter game Menu System by pressing and holding TEST MODE switch inside coin door area. Select DIAGNOSTICS from Main menu. Once in DIAGNOSTICS menu, choose MONITOR SETUP.

CAUTION: Do not remove or install any connector while power is turned on. Doing so will damage the CPU Board or hard disk drive, and void the warranty.

Inspect to see if external acceptor indicators (Pricing, Flashing Arrows, etc.) are illuminated. Check connectors and cables for wiring continuity from CPU Board connectors to acceptors. 4. Enter game Menu System by pressing and holding TEST MODE switch inside coin door. From DIAGNOSTICS menu, choose SWITCH TESTS. Use these tests to confirm operation of each switch used in game. 5. Check for continuity in each of suspect switch connections (Common to Normally Open or Common to Normally Closed). Replace faulty switches (bent levers, broken actuators, etc.). 6. Verify that each acceptor is operating properly by placing it in known good unit.

Enter game Menu System by pressing and holding TEST MODE switch inside coin door. From Main Menu, choose DIAGNOSTICS from Main Menu. Once in DIAGNOSTICS menu, choose SOUND SUBSYSTEM. These tests confirm operation of each segment of sound system.2. Turn off game power. Remove grilles and check speakers. This game uses two coaxial speakers. Ensure that speakers are FULL RANGE (100 to 10,000 Hz response) and rated for at least 20 WATTS.3. Check for reversed wires at one speaker. Weak low frequencies and thin or hollow sound quality is symptom of incorrectly phased speakers. This condition may not be detected by SOUND SUBSYSTEM, but it will be audible during normal game operation.4. Check that cabinet wiring is correct for this game. Verify that cabinet wiring provides separate wires (not common return) for each speaker. Check connection of all cabinet ground wires.5. Using 2 Volt A.C. setting on digital voltmeter, measure voltages at speaker terminals. Any reading here indicates that supply voltages are unstable and may contain ripple or noise.6. Verify that speaker operates properly by placing in known good unit.

<ul style="list-style-type: none"> • Monitor appears non-functional • Audio is present • Controls operate as expected 	<ol style="list-style-type: none"> 1. Unlock and open rear cabinet door. Verify connection of A.C. Power to Video Monitor. Inspect CRT neck under low light conditions. You'll see glow near CRT base if voltage appears across filament circuits. This indication proves that some monitor circuits receive power. Still, voltages or signals may not be normal. 2. Turn off game power. Verify that Video Signal and Remote Adjustment Board connectors seat properly on Video Monitor Board assembly. Check other monitor connectors in same way. 3. Examine A.C. line fuse on Video Monitor Board assembly. If fuse is faulty, replace it with an identical fuse of proper voltage and current rating. 4. Ensure that no loose parts or wires are caught on chassis or mounting brackets. 5. Check that brightness (intensity) and contrast have not been set to their minimum levels. 6. Verify that Video Monitor operates correctly by placing it in known good unit.

	<p>WARNING: In normal operation, the monitor does not require isolation from the A.C. line voltage. During bench servicing, etc., you may need to operate the monitor outside the cabinet. If you do, YOU MUST ISOLATE THE MONITOR FROM LINE VOLTAGE WITH AN ISOLATION TRANSFORMER.</p>
	<p>CAUTION: Do not operate monitor without the Remote Adjustment Board.</p>

Once in DIAGNOSTICS menu, choose DISK TESTS. Use this set of tests to check operation of critical components. 2. Turn off game power. Unlock and open front door. Inspect CPU Board assembly. Ensure that JAMMA cable connector seats properly into mating edge connector on CPU Board. Check cable connectors for correct alignment and continuity. 3. Verify that ROM instruction set is correct for this game. Game set includes more than one ROM. Each ROM circuit is labeled with assembly number and software version. 4. Verify that CPU Board assembly is correct for this game. Each CPU Board is marked with manufacturer name, assembly number and hardware version. 5. Verify that hard disk drive assembly is correct for this game. Each hard disk drive unit is marked with manufacturer name, assembly number and program version. 6. Turn on game power. Using 20 Volt D.C. setting on digital voltmeter. Measure D.C. voltages present at power connector pins. Verify +5V source if it is adjustable. 7. Using 2 volt A.C. setting on digital voltmeter, measure same D.C. voltages as above. Any reading indicates that supply voltages are unstable and may contain ripple or noise. 8. Compare CPU Board jumper positions with CPU Jumper Status Chart (Section Four). Compare CPU Board light emitting diode states with CPU Indicator Chart (Section Three).

	<p>CAUTION: Do not remove or install any connector when power is turned on. Installation under power will damage the CPU Board or hard disk drive and void the warranty.</p>
	<p>NOTICE: Before adjusting the monitor, demagnetize the CRT with an industrial grade degaussing coil.</p>

Network communication circuits may have prevented a full update. Turn off power to all connected cabinets. Then perform update on only one cabinet at a time. WARNING

Prevent shock hazard and assure proper game operation. Plug this game into a properly grounded outlet. Do not use a cheater plug to defeat the power cord's grounding pin. Do not cut off the ground pin.

WARNING

A very small portion of the population has a condition which may cause them to experience epileptic seizures or have momentary loss of consciousness when viewing certain kinds of flashing lights or patterns that are present in our daily environment. These persons may experience seizures while watching some kinds of television pictures or playing certain video games. People who have not had any previous seizures may nonetheless have an undetected epileptic condition.

If you or anyone in your family has experienced symptoms linked to an epileptic condition (e.g. seizures or loss of awareness), immediately consult your physician before using any video games.

We recommend that parents observe their children while they play video games. If you or your child experience the following symptoms: dizziness, altered vision, eye or muscle twitching, involuntary movements, loss of awareness, disorientation, or convulsions, DISCONTINUE USE IMMEDIATELY and consult your physician.

NOTE: This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generated, uses and can radiate radio frequency energy and if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

When MIDWAY GAMES INC. ships a game, it is in compliance with FCC regulations. Your label is proof of compliance. Legal repercussions to the owner or distributor may result if the label is missing or damaged. If your game does not contain an FCC compliance label, call MIDWAY GAMES INC. immediately.
